RE: Web Developer Co-op | Intelx Inc. | Winter 2026

</div>

Dear Mr. Godwin Ikhidero ,

Last semester, I built *DALScooter* — a serverless scooter rental platform using **AWS Cognito, Lambda, SQS/SNS, and CloudFormation** — where I saw first-hand how well-architected infrastructure can transform user experience. That's exactly what drew me to Intelx's co-op role: the chance to help build a scalable, secure feedback platform using a modern stack I've already worked with — and believe in.

Currently pursuing my Master of Applied Computer Science at Dalhousie, I've developed full-stack web applications with **React/Next.js**, **Node.js/Express**, and **PostgreSQL**, and have experience implementing **role-based access**, deploying with **Vercel & AWS**, and writing **tests with Jest and Cypress**. At HireUp, I built CI/CD pipelines with **GitHub Actions and Docker**, integrated **Stripe**, and contributed to secure API design. I'm equally comfortable working with designers, writing clean backend code, or optimizing queries with MongoDB.

I'm excited by Intelx's mission to turn user feedback into meaningful product insights — and I'd love to contribute my skills in full-stack development and cloud-native deployment to help build something impactful from the ground up.

Thank you for considering my application. I'd be thrilled to chat further about how I can support Intelx's team and vision during this co-op term.

Sincerely,
Dharma Kevadiya
